1. 30-Second TL;DR

- The APAC Energy market is facing volatility due to geopolitical tensions, particularly in the Middle East, leading to a surge in oil prices.
- Brent crude has risen over 6% to approximately \$78.80 per barrel, impacting subsectors like Oil & Gas and Renewable Energy.
- The average EV/EBITDA multiple for the Energy sector is around 8.5x, with Oil & Gas at 6.3x and Renewable Energy at 15.1x.
- Investors should monitor geopolitical developments and assess their sector exposure as rising oil prices may shift investment strategies.

2. 1-Minute TL;DR

- The Energy sector is currently volatile, driven by geopolitical tensions in the Middle East, causing Brent crude prices to rise over 6% to about \$78.80 per barrel.
- This surge impacts various subsectors: Oil & Gas benefits from higher prices, while Renewable Energy may see a short-term shift back to fossil fuels.
- The average EV/EBITDA multiple for the Energy sector stands at 8.5x, with Oil & Gas at 6.3x and Renewable Energy at 15.1x, reflecting growth potential.
- Key drivers include rising oil prices and geopolitical tensions, while economic uncertainty and regulatory scrutiny pose headwinds.
- Investors should closely monitor these dynamics and consider strategic M&A opportunities in energy infrastructure.

3. 2-Minute TL;DR

- The APAC Energy market is experiencing heightened volatility due to geopolitical tensions, particularly involving Iran and the U.S., leading to a significant increase in oil prices. Brent crude has surged over

APAC Energy Sector M&A & Valuation TLDR - 2026-07-13

APAC Energy Sector

6% to approximately \$78.80 per barrel, impacting market sentiment and M&A activity across subsectors.

- In the Oil & Gas subsector, companies are likely to benefit from higher margins, while the Renewable Energy sector may face challenges as rising oil prices could shift investment focus back to fossil fuels. Utilities are under pressure from increased operational costs, and energy infrastructure remains stable but requires reassessment of geopolitical risks.

- The average EV/EBITDA multiple for the Energy sector is around 8.5x, with notable variations: Oil & Gas at 6.3x, Renewable Energy at 15.1x, Utilities at 12.8x, and Energy Infrastructure at 9.7x. These multiples indicate the market's perception of growth potential, with renewables commanding higher valuations.

- Key market drivers include rising oil prices and geopolitical tensions, while economic uncertainty and regulatory scrutiny present challenges. Investors should monitor these developments closely and evaluate their exposure to different subsectors, as strategic M&A opportunities may arise, particularly in energy infrastructure.
