CONFIDENTIAL - FOR INTERNAL USE ONLY

1. 30-Second TL;DR

- The Energy sector has seen no recent M&A activity due to market volatility, regulatory scrutiny, and strategic reevaluation.
- Oil & Gas faces pressure from geopolitical tensions, while Renewable Energy is growing rapidly, with an average EV/EBITDA multiple of 8.5x.
- Key drivers include investment in renewables and geopolitical tensions, while headwinds consist of rising oil prices and economic uncertainty.

2. 1-Minute TL;DR

- Recent M&A activity in the Energy sector is stagnant, attributed to market volatility and regulatory challenges. Companies are focusing on organic growth rather than acquisitions.
- The Oil & Gas subsector is under pressure due to geopolitical tensions, while Renewable Energy is thriving, with significant investments and a growing market share.
- The average EV/EBITDA multiple for the Energy sector is 8.5x, with Renewable Energy commanding higher multiples at 15.1x, compared to Oil & Gas at 6.3x.
- Key market drivers include geopolitical tensions affecting oil prices and a strong push for renewable investments, while rising oil prices and economic uncertainty pose challenges.

3. 2-Minute TL;DR

- The Energy sector has not reported any M&A deals recently, primarily due to market volatility, increased regulatory scrutiny, and companies reassessing their strategic priorities. This has shifted focus towards organic growth strategies.
- The Oil & Gas subsector is facing challenges from geopolitical tensions, particularly the Iran-US conflict, which has pushed Brent crude prices above \$85 per barrel. Despite this, companies are exploring strategic opportunities.

APAC Energy Sector M&A & Valuation TLDR - 2026-07-21

APAC Energy Sector

- Conversely, the Renewable Energy sector is experiencing robust growth, driven by investments and technological advancements, with an average EV/EBITDA multiple of 15.1x, indicating strong investor interest.
- The overall Energy sector has an average EV/EBITDA multiple of 8.5x, with traditional sectors like Oil & Gas trading lower at 6.3x due to transition risks.
- Key market drivers include geopolitical tensions impacting oil prices and a strong push for renewable investments, while headwinds consist of rising oil prices and economic uncertainties affecting consumer spending and investment decisions.
