

Q1: Do all functions cover global markets, including the US and Europe — can Europe be narrowed down to London or Paris?

A1: Yes. TMT Bot's market intelligence pipeline covers major global financial markets including the US and Europe. Users can easily select target territories directly from the **user dashboard card decks** to access regional news, industry briefings, and market analysis. For Europe, our system applies **regional filters** (e.g., London, Paris) to provide highly targeted coverage, ensuring users can prepare for **investment banking interviews and market discussions** with localized insights.

Q2: For the Energy sector, will it also cover upstream industries?

A2: Yes. Our **Energy industry coverage** is designed to mirror real investment banking sector coverage. It includes upstream industries such as **lithium, rare earth metals**, and other **traditional materials**, allowing users to follow value chain developments and **understand market dynamics from upstream to downstream**. This is critical for candidates preparing for **energy M&A, project finance, and sector-specific technical interviews**.

Q3: If I have zero foundation and only use TMT Bot for market sense, will it be detailed enough for interviews (not vague like DeepSeek or ChatGPT)?

A3: Absolutely. **TMT Bot's core mission** is to **eliminate hours of manual market research** and give students interview-ready insights. Unlike generic AI models that produce vague overviews, TMT Bot provides **structured industry briefs, deal highlights, and trending market narratives** tailored for investment banking recruiting.

For example, one sophomore at Colby College with zero healthcare banking background used our **Healthcare briefings** to confidently navigate a networking call with a banker — and made a strong impression.

Q4: Can it help me practice technical interview questions?

A4: Great question. I'll be **brutally honest** with you — No. TMT Bot focuses entirely on **behavioral interviews, market sense, and networking strategy**. Unlike platforms that try to do everything, we go deep in the areas other services avoid because they're harder to quantify. This focus is why **students use TMT Bot to crush behavioral interviews and build real conversational edge** during recruiting.

Q5: I'm currently revising my CV. I realized my past deal experiences were just "dirty work" without understanding the logic. Can AI fill the gaps?

A5: Yes. One of TMT Bot's most impactful features is **logic reconstruction for past deal experience**. It can help you articulate the **strategic rationale** behind your work — for example:

- Why a PE fund might choose a **10x valuation multiple** (comps, sector averages, precedent transactions).
 - Why **Term Sheets include exclusivity clauses** and how they protect deal processes.
 - What **growth equity investors prioritize** (e.g., revenue growth, scalability, unit economics).
This turns your CV from a **task list** into a **strategic narrative**, which is essential for **PE, IB, and VC recruiting**.
-

Q6: How many Product/Coverage groups are in TMT Bot?

A6: As listed on the homepage and in the **user dashboard**, TMT Bot currently supports **five major coverage groups**: TMT, Energy, Healthcare, Consumer, and Industrial. These sectors reflect the structure of real **investment banking coverage groups**, ensuring users can align their preparation with the recruiting landscape and build **industry-specific market sense** efficiently.

Q7: During fit interviews, I need to understand the differences between banks in the same tier. Can AI provide comparisons (e.g., Evercore vs. Lazard, or Goldman Sachs / Morgan Stanley / JPMorgan Chase & Co.)?

A7: Yes. TMT Bot provides structured **bank comparison insights** through the **Banking Map** feature. For example:

- **Evercore vs. Lazard**: Both are elite boutiques, but Evercore is more execution-heavy in the US, while Lazard has a strong advisory and restructuring legacy in Europe.
- **GS vs. MS vs. JPM**: Goldman Sachs is known for its aggressive deal flow and culture, Morgan Stanley is strong in ECM and TMT coverage, and JPMorgan Chase & Co. offers unparalleled balance sheet strength and broad global coverage.
These insights are invaluable for **fit interviews, networking calls**, and showing nuanced understanding of different bank cultures. This feature is currently in beta and

scheduled for full launch in **November 2025**.
